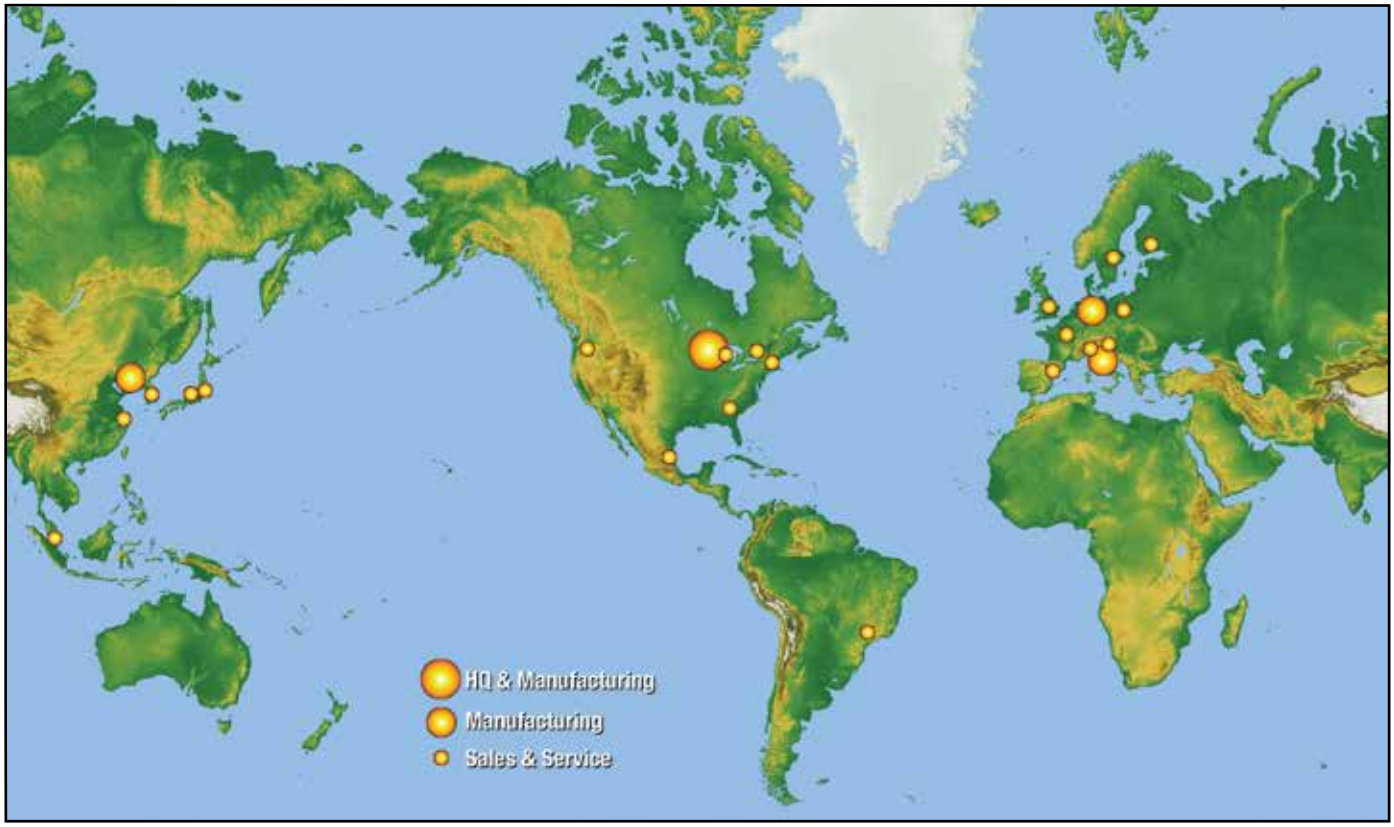
DEUBLIN KEEPS THE WORLD ROTATING



Since 1945, Deublin has grown from a small garage shop to the world's largest manufacturer of rotating unions. Today, Deublin's international headquarters is located in Waukegan, Illinois, with manufacturing facilities, sales offices and warehouses located in 17 countries on four continents.

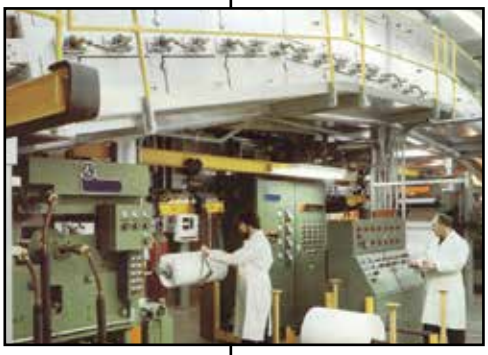
Our worldwide distribution network allows end users all over the world to specify Deublin unions when purchasing equipment made in another country. We're manufacturers ourselves, so we understand the importance of fast response time to keep your manufacturing process rolling. Wherever you're located, Deublin has a stocking distributor nearby to meet your requirements—quickly.

UNIQUE REQUIREMENTS DEMAND CUSTOM UNIONS

Rotating unions must accommodate a broad range of materials, viscosities, temperatures, pressures and speeds. That's why the Deublin product line offers over 500 standard unions, over 3,000 separate models.

Even this extensive line cannot meet all the specialized needs required by our customers. That's why we manufacture an ever-growing line of custom unions to meet individual manufacturers' particular requirements. In many instances, we can adapt or convert an existing union and offer a cost-effective solution to meet your exact specifications.

A ROTATING UNION FOR EVERY APPLICATION



Rotating unions are used in many manufacturing processes to cool, heat or transfer fluid (pneumatic or hydraulic) power. Typical rotating unions feature deep groove ball bearings to support the rotating component against the stationary component, and balanced, precision-engineered mechanical seals to seal the media flow. Deublin rotating unions vary for each application, depending on design, bearing type, construction and material required.

In 1989, the Deublin product line was expanded to include steam joints and siphon systems for paper machine dryer cans.

Here are just some of the industries that rely on Deublin for their unique rotating union needs:

- ALUMINUM
- AUTOMOTIVE
- CAN MAKING
- CAR WASH EQUIPMENT
- CHEMICAL/PETROCHEMICAL/REFINERY
- CONSTRUCTION EQUIPMENT
- DISTILLERIES/BREWERIES
- FARM EQUIPMENT
- FLOOR & WALL COVERINGS
- FOOD PROCESSING MACHINERY
- GLASS MANUFACTURING
- INSULATION
- LAUNDRY EQUIPMENT
- LUMBER & WOODWORKING
- MACHINE TOOL
- MARINE
- MINING
- PAPER
  - CONVERTING PLANTS
  - CORRUGATING
  - PULP & PAPERBOARD
  - ROOFING
- PETROLEUM
- PLASTICS
- PRINTING
  - BUSINESS FORMS
  - FLEXOGRAPHIC
  - WEB OFFSET
- RUBBER
- STEEL
- TEXTILE
- TIRES
- TRUCKING

DEUBLIN'S state-of-the-art manufacturing facilities are strategically located worldwide, and feature the latest CNC technologies including multi-axis/multi-function, robotic interfaces, single point threading and cylindrical grinding.

These advanced machining techniques and proprietary processes allow Deublin to achieve the most precise tolerances in the industry, and ensure superior union performance and service life.

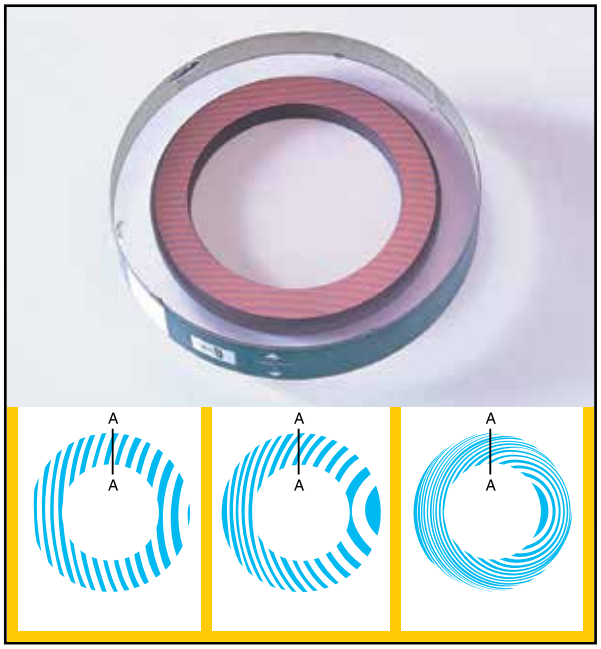
WE TREAT PRECISION AS AN EXACT SCIENCE

PRECISION

A rotating union must be capable of containing high pressures while rotating at very high speeds. Smooth, easy rotation can only be achieved by exactly mating the seal faces to minimize friction.

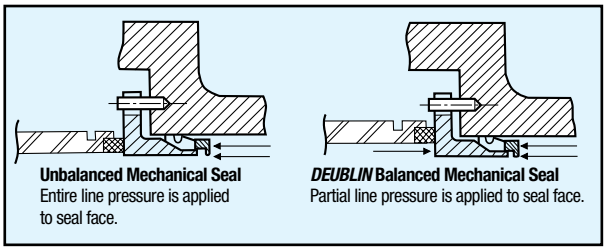
Precision and tight tolerances are critical in the micro lapping of seal faces. All Deublin seals are micro lapped to an optical flatness within 2 light bands or 0.000023" utilizing proprietary lapping machinery and compounds. This level of precision is essential for dependable leak-proof operation.

Housings are machined on multi-axis twin-spindle lathes to obtain the necessary part-to-part precision. Rotors and other parts are turned on automatic bar machines to ensure true-running rotating unions without any wobble. This assures extended service life.



BALANCED MECHANICAL SEAL

The greater the pressure on a rotating seal face, the greater the friction, torque and wear on the union. That's why Deublin rotating unions feature "balanced mechanical seals." With this technology, the thrust load or seal face contact pressure is kept to a minimum regardless of media pressure. This reduces wear, resulting in longer seal life. The spring-loaded seal is keyed so that it cannot rotate or creep, which can cause premature failure in secondary seals, resulting in a leaking union.



Unbalanced Mechanical Seal
Entire line pressure is applied to seal face.

***DEUBLIN* Balanced Mechanical Seal**
Partial line pressure is applied to seal face.

EXTENDED LIFE SEALING

Responding to ever-increasing speeds and pressures, Deublin pioneered Extended Life Sealing (E.L.S.). E.L.S. rotating unions offer outstanding performance under the toughest conditions, and can extend service life two to four times, depending on the severity of the application. E.L.S. unions use advanced materials such as tungsten carbide and silicon carbide to provide the best possible seal solution for the application.

Where reliability is of prime importance, E.L.S. should be specified to protect against contaminants and resist wear caused by rust, scale, chips and other harmful abrasives.

PROFESSIONAL SERVICE AROUND THE WORLD

At Deublin, our service is as reliable as our products. Given the importance of rotating unions to your equipment's performance, our products have to be reliable. To provide you local and emergency service, we have a worldwide service network consisting of wholly-owned subsidiaries and authorized distribution network.

Whether you need a spare part, a new product, technical advice, or help with an ongoing design project, our experienced customer service representatives and engineers are always available to provide immediate assistance.

For all your rotating union requirements—no matter how unique or complex—you can rely on Deublin.

NUMBER SYSTEM

DEUBLIN ordering numbers for standard rotating unions consist of 2, 3 or 4 number groups. Each group describes a particular characteristic feature such as application, seal combination or rotor connection (refer to ordering example).

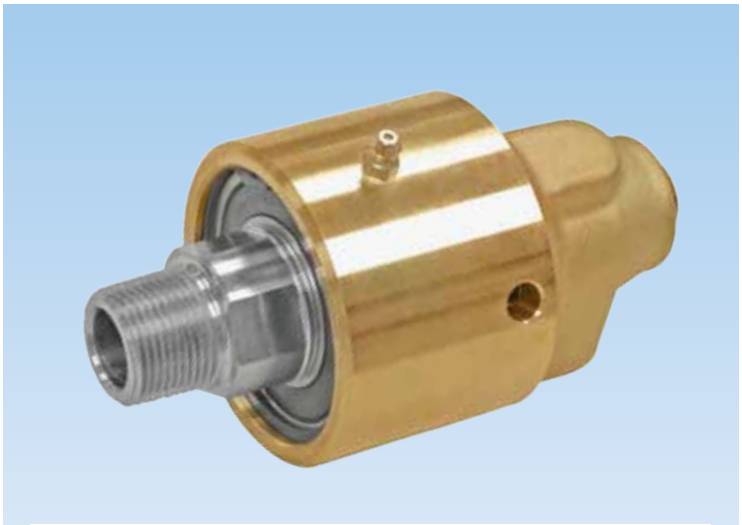
Rebuilding and repair kit numbers differ from their respective rotating union numbers by the insertion of a letter (B or C). The letter B stands for a rebuilding kit, and the letter C for a repair kit (refer to ordering example).

ORDERING EXAMPLE:

255-000-284681
- 255 — model / series / size
- 000 — seal combination
- 28 — rotor
- 4681 — elbow for duoflow design

255-000B284 — Service kit Plus

257-000C — Service kit



DEUBLIN

General Purpose 55 Series Unions

- Monoflow and duoflow design
- Self-supported rotating union
- Radial housing connection
- Balanced mechanical seal
- 3 vent holes
- Forged brass housing
- Stainless steel rotor
- Special options: threaded vent holes, low torque design
- Lubrication Guide page 55

Operating Data

Maximum Water Pressure	Model 55-555	750 PSI	50 bar
Maximum Water Pressure	Model 655	600 PSI	41 bar
Maximum Saturated Steam Pressure (Intermittent)		15 PSI	1 bar
Maximum Hot Oil Pressure		100 PSI	6.6 bar
Maximum Speed NPT Threads	Model 55-555	1,500 RPM	1,500/min
	Model 655	750 RPM	750/min
Maximum Speed Straight Threads			
	Model 55-255	3,500 RPM	3,500/min
	Model 355	3,000 RPM	3,000/min
	Model 525-555	2,500 RPM	2,500/min
	Model 655	750 RPM	750/min
Maximum Temperature	250°F	>250°F consult ***DEUBLIN***	

Seal Combinations

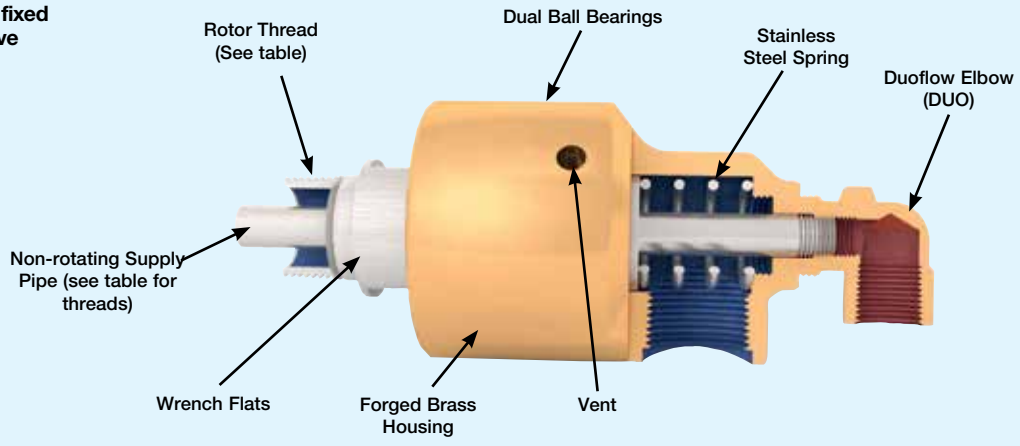
- Carbon Graphite/Bronze for water - Standard
- Carbon Graphite/Ceramic for hot oil, hot water and saturated steam - Optional
- Multi-purpose applications

Seal Combination - E.L.S.

- Tungsten Carbide/Ceramic for severe conditions (poor water quality), max. temperature 200°F

Torque Ratings 55 Series		
Size	ft.lbs	Nm
55	¼	0.34
155	⅓	0.50
255	½	0.68
355	1⅓	1.80
525	1⅓	1.80
555	2½	3.40
655	3	4.07

Illustration shows duoflow with fixed supply pipe. Monoflow units have pipe plugs instead of an elbow.



DEUBLIN

57 Series with Silicon Carbide Seals, for Water Service

- Monoflow and duoflow design
- Self-supported rotating union
- Radial housing connection
- Balanced mechanical seal
- Keyed rotor seal
- Easy and quick replacement of sealing components (rotor seal, floating seal)
- Ball bearings lubricated for life
- For poor water quality (E.L.S.)
- 3 vent holes
- Forged brass housing
- Stainless steel rotor
- Special options: threaded vent holes

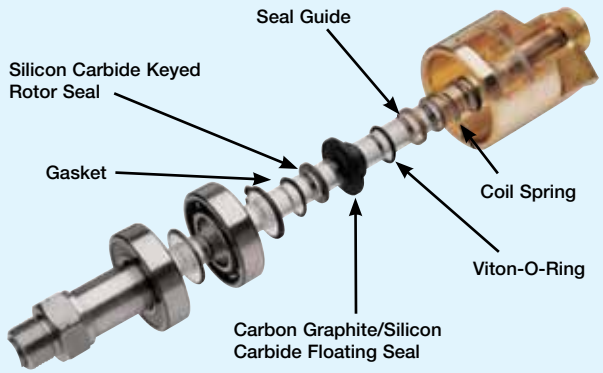
Operating Data

Maximum Water Pressure		150 PSI	10 bar
Maximum Speed NPT Threads	Model 57-557	1,500 RPM	1,500/min
	Model 657	750 RPM	750/min
Maximum Speed Straight Threads			
	Model 57-257	3,500 RPM	3,500/min
	Model 357	3,000 RPM	3,000/min
	Model 527-557	2,500 RPM	2,500/min
	Model 657	750 RPM	750/min
Maximum Water Temperature		200°F	>200°F consult ***DEUBLIN***

Seal Combination
- Carbon Graphite/Silicon Carbide - Standard

Seal Combination - E.L.S.
- Silicon Carbide/Silicon Carbide for severe conditions (poor water quality)

Torque Ratings 57 Series		
Size	**ft.lbs**	**Nm**
57	¼	0.25
157	⅓	0.50
257	¾	1.00
357	1½	2.00
527	1½	2.20
557	2¼	2.90
657	3½	4.50



Union Repair

The 57 Series is designed for quick, easy replacement of both Floating Seal and the Rotor Seal.

The "57's" seal is seated in a keyed counter bore at the rotor's end. The worn seal simply lifts out and the new one drops right in. Since the entire rotor does not need to be replaced or relapped, the repair is fast, easy and on the spot. As you only replace the seals, the repair cost is very economical.

For Ordering Number of Repair Kit see page 5.

55 & 57 Series Monoflow Union Specifications

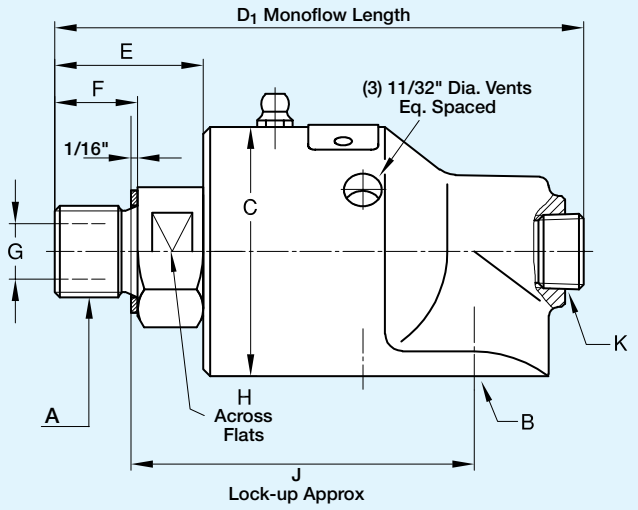


Chart Instructions
Select Union Size and Rotor Thread. Follow this line to opposite page to find Duoflow Elbow Specifications. Add Duoflow Elbow Suffix to the end of the Ordering Number.

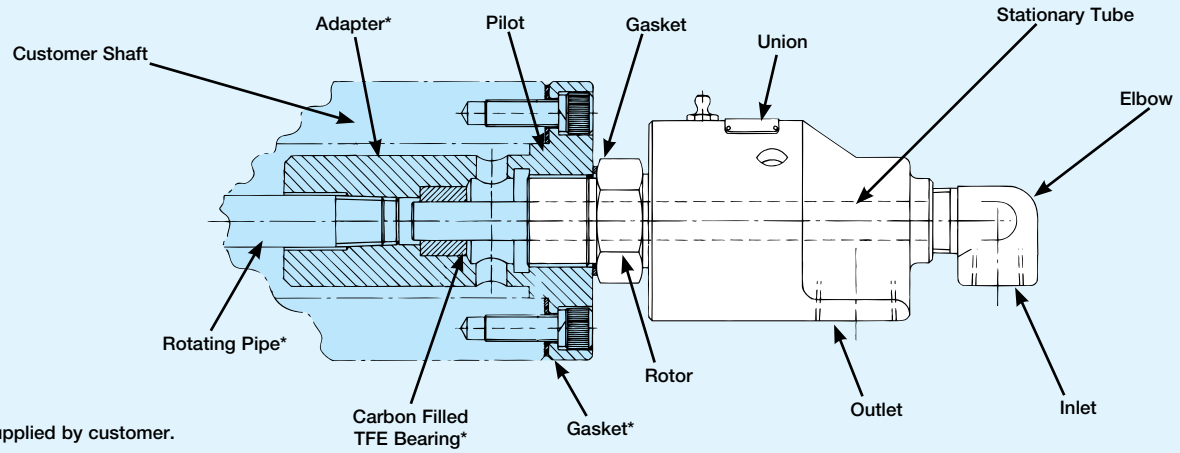
Duoflow Supply Pipe Installations

Deublin water service unions can be adapted for Duoflow applications where a single media is circulated through and around the supply pipe. Duoflow elbows are available in 3 styles to accept a variety of different supply systems. The guidelines shown below should be carefully considered. A poorly designed supply system can contribute to premature union failure.

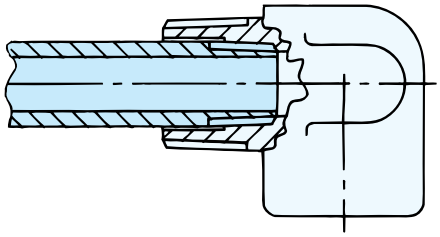
Where long pipes or high speeds are required, an adapter should be used to avoid transmitting stresses from heavy pipes, cascading water or vibrations to the union. A typical adapter is illustrated.



*Supplied by customer.

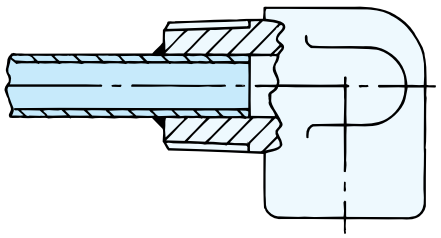
Threaded Pipe

The largest threaded supply pipe achieves the maximum flow rates available for a particular size union. Stresses at the pipe thread can cause breakage allowing the pipe to fall into the roll. For this reason pipe lengths longer than 4 union lengths (4 x D1) and rotational speeds above 1000 RPM should be avoided.



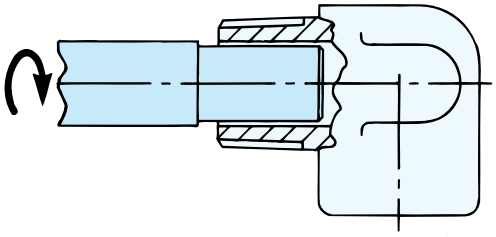
Fixed Tube

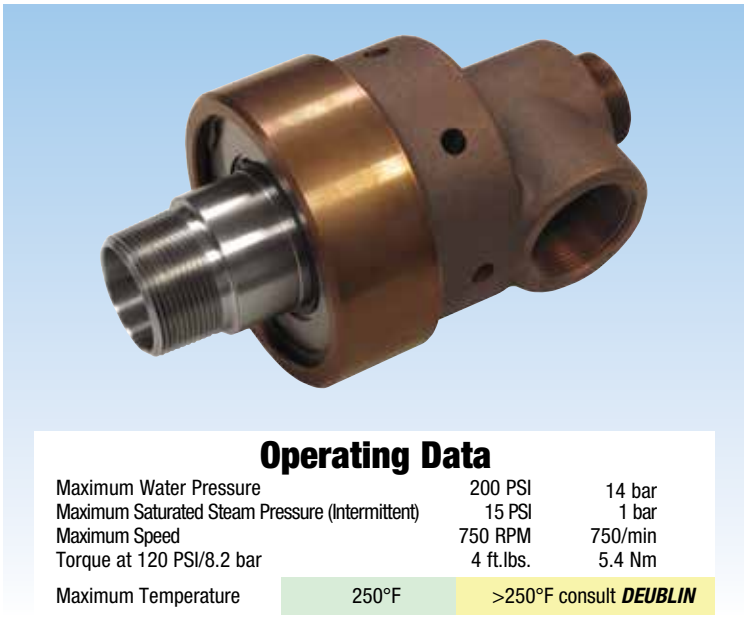
Thin wall stainless steel tube silver soldered into the Duoflow elbow produces the strongest, lightest weight assembly. The thinner wall sections allow greater flow rates than the threaded pipe. Maximum flow rates are obtained with the largest tube available for a given size union. Tube length is usually limited to 6 union lengths (6 x D1). Speeds to 3500 RPM are possible.



Rotating Pipe

Rotating pipes are fastened internally to rotate with the roll. The Duoflow elbow helps to support the pipe and restrict crosstalk between passages. The pipe must be straight and concentric to the center line to avoid excessive loading of the union. The union must also have a rotor with a straight thread (Example 1"-14" UNS) rather than a tapered pipe thread to assure concentricity. Rotational speeds above 1000 RPM should be avoided.





DEUBLIN

2½" Field Repairable All Purpose Unions

- Monoflow and duoflow design
- Self-supported rotating union
- Radial housing connection
- Balanced mechanical seal
- 3 vent slots
- Cast iron housing - standard
  Cast iron housing nickel-plated - optional
- Steel rotor
- Lubrication Guide page 55

Operating Data

Maximum Water Pressure	200 PSI	14 bar
Maximum Saturated Steam Pressure (Intermittent)	15 PSI	1 bar
Maximum Speed	750 RPM	750/min
Torque at 120 PSI/8.2 bar	4 ft.lbs.	5.4 Nm
Maximum Temperature	250°F	>250°F consult ***DEUBLIN***

Seal Combination
- Carbon Graphite/Tungsten Carbide - Standard

DEUBLIN Exclusive On-The-Machine Repair Cartridge

Seals are replaced quickly and easily. There's no need to remove hose connections or use special tools. Make sure the system is cold and pressureless! Simply remove 6 hex bolts and end cap, then remove floating seal cartridge and rotor seal face and replace with new seals. Rotor seal is keyed and sealed to the rotor with a built-in O-Ring. Replace end cap, hex bolts and safety wire. Detailed instructions available from ***DEUBLIN***.

DEUBLIN

F Series 5" Water Union

- Monoflow and duoflow design
- Self-supported rotating union
- Balanced mechanical seal
- Seal combination:
  Carbon Graphite/Tungsten Carbide
- Two widely-spaced ball bearings
- Labyrinth seal protects bearings
- Cast iron housing
- High corrosion resistant
- Steel flanged rotor
- On-the-machine seal replacement capability
- Inlet/outlet flange:
  standard ANSI
  optional DIN, JIS
- Special designs up to 12" available upon request

Operating Data

Maximum Water Pressure*	230 PSI	16 bar
Maximum Speed*	1,000 RPM	1,000/min
Maximum Temperature	250°F	>250°F consult ***DEUBLIN***

*Union is designed for continuous operation at either maximum speed or maximum pressure. If operating conditions are close to maximum pressure and speed simultaneously, consult ***DEUBLIN***.

DEUBLIN

2400 Series Rotating Union

- Monoflow and duoflow design
- In-the-shaft mounted
- Self-supported rotating union
- Flanged housing or mounted with retaining plate
- Balanced mechanical seal
- Seal combination:
  Silicon Carbide/Silicon Carbide
- Brass housing and elbow
- Stainless steel rotor and supply pipe
- Engineered sleeve bearing
- Full-media flow
- Easily field repairable

DEUBLIN
9000 Series Steam Unions

- Monoflow and duoflow design
- Self-supported rotating union
- Spherical Carbon Graphite seal
- Seal wear indicator allows preventive maintenance
- 2 torque lugs on the housing
- Nickel-plated cast iron housing
- Steel rotor blackened for steam service

Operating Data

Maximum Saturated Steam Pressure*	150 PSI	10 bar
Maximum Saturated Steam Temperature	365°F	185°C
Maximum Hot Oil Pressure*	100 PSI	7 bar
Maximum Speed*	400 RPM	400/min
Maximum Hot Oil Temperature	450°F	232°C

* Union is designed for continuous operation at either maximum speed or maximum pressure. If operating conditions are close to maximum pressure and speed simultaneously, consult ***DEUBLIN***.

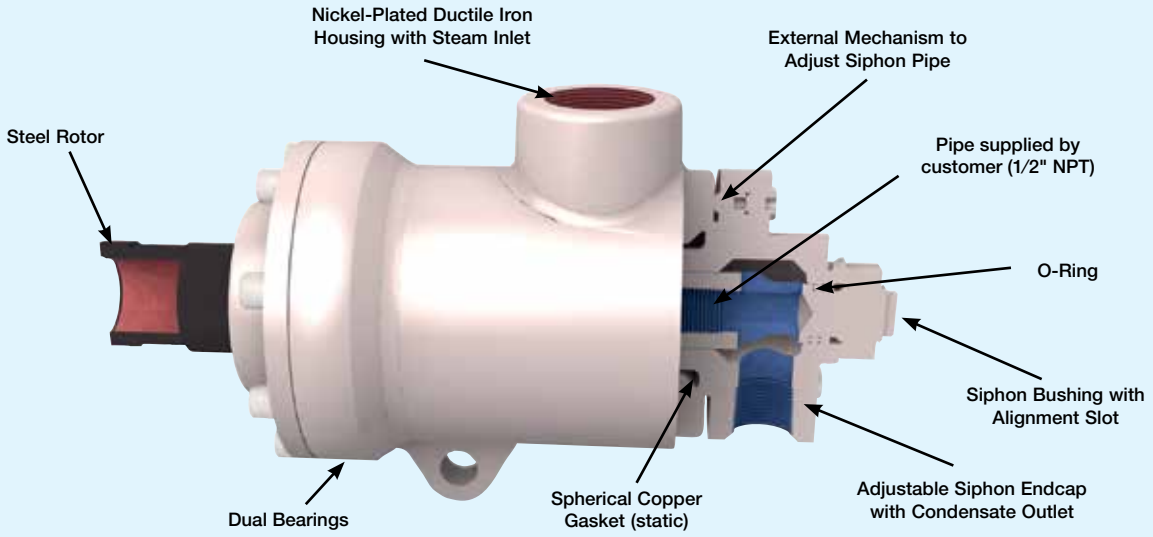
DEUBLIN

HPS Series for High Pressure Steam Service in Corrugators

- Monoflow and duoflow design
- Self-supported rotating union
- Seals and bearings made of special Carbon Graphite
- Convex seal ring better suited to handle mechanical and thermal shock
- External mechanism to adjust siphon pipe through end cap
- Nickel-plated front and rear end cap
- Nickel-plated ductile iron housing
- Stainless steel spring
- Heavy duty steel rotor design
- Dual bearings for extended service life

Operating Data

Maximum Saturated Steam Pressure	250 PSI	17 bar
Maximum Speed	400 RPM	400/min
Maximum Temperature	400°F	200°C



Flange Adapter Kits

DEUBLIN

H Series Steam and Hot Oil Unions

- Monoflow and duoflow design
- Self-supported rotating union
- Convex seal ring better suited to handle mechanical and thermal shock
- Two widely-spaced graphite bearings
- H57 - H127 optional with sight glasses in the end cap for visual inspection of condensate removal
- Seal wear indicator allows preventive maintenance
- Flanged or threaded rotor available
- Cast iron housing
- Stainless steel rotor
- For steam and hot oil applications in paper, plastic and textile industries and open gear paper machines

Operating Data 3/4" – 2"

Maximum Saturated Steam Pressure	150 PSI	10 bar
Maximum Speed Saturated Steam Service	400 RPM	400/min
Maximum Saturated Steam Temperature	365°F	185°C
Maximum Hot Oil Pressure	100 PSI	7 bar
Maximum Speed Hot Oil Service	400 RPM	400/min
Maximum Hot Oil Temperature	450°F	232°C

Operating Data 2 1/2" – 5"

Maximum Saturated Steam Pressure	150 PSI	10 bar
Maximum Speed Saturated Steam Service	180 RPM	180/min
Maximum Saturated Steam Temperature	365°F	185°C
Maximum Hot Oil Pressure	100 PSI	7 bar
Maximum Speed Hot Oil Service	350 RPM	350/min
Maximum Hot Oil Temperature	450°F	232°C

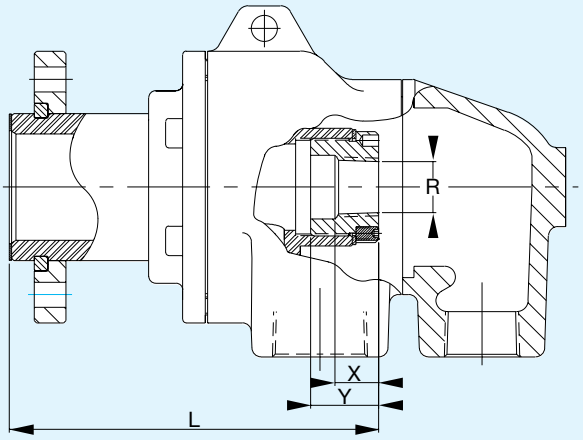
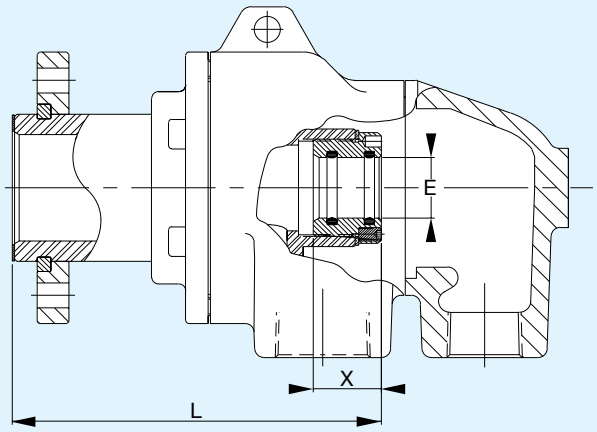
Duoflow Central Pipe Specifications

Rotating Central Pipe
R For rotating siphon (steam inlet pipe); the inner pipe is connected by means of a threaded bushing that screws into the rotor.



Rotating Central Pipe Axial Movement
E For a rotating siphon capable of axial movement; a sliding connection is made between the bushing and the central pipe to allow for the thermal expansion of the central pipe.



Model	L	X	Y	Optional Pipe Sizes "R"
H20	4 19/32"	19/32"	25/32"	1/8" - 1/4" NPT
H25	5 1/4"	19/32"	25/32"	1/4" - 3/8" NPT

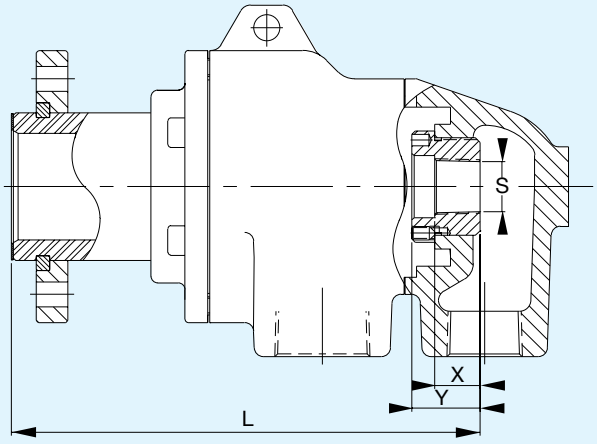
H127	18 1/8"	2 3/8"	1 1/4" - 4"

Stationary Central Pipe
S For fixed siphons; the pipe is connected by means of a threaded bushing that screws into the end cap.



Stationary Central Pipe
SK For stationary fixed siphons; the central pipe is supported in the end cap and connected by means of an external bolt to the end cap.

Adjustable Siphons Available
Consult *DEUBLIN*

DEUBLIN

⅛" to ½" Air-Hydraulic Unions

- Monoflow design
- Self-supported rotating union
- Radial housing connection
- Balanced mechanical seal
- Seal combinations:
  Carbon Graphite/Hardened Tool Steel or
  Carbon Graphite/Silicon Carbide
- Felt oiler in seal cavity for air service
- Oiler for relubrication (3 - 5 drops/month)
- Low torque
- Weight-optimized design
- Aluminum housing
- Bearings lubricated for life

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Vacuum	28" Hg	6.7 kPa
Maximum Hydraulic Pressure		
Model 1005	1,000 PSI	70 bar
Model 1102	1,000 PSI	70 bar
Model 1115	500 PSI	34 bar
Model 1205	750 PSI	50 bar
Model 2200*	1,000 PSI	70 bar
Maximum Speed NPT Threads	1,500 RPM	1,500/min
Maximum Speed Straight Threads	3,500 RPM	3,500/min
Maximum Temperature	250°F	120°C

* Union is designed for continuous operation at either maximum speed or maximum pressure. If operating conditions are close to maximum pressure and speed simultaneously, consult ***DEUBLIN***.

See next page for dimensional data.

DEUBLIN

¾" to 1½" Air-Hydraulic Unions

- Monoflow design
- Self-supported rotating union
- Radial housing connection
- Balanced mechanical seal
- Seal combinations:
  Carbon Graphite/Hardened Tool Steel or
  Carbon Graphite/Ceramic
- Felt oiler in seal cavity for air service
- Oiler for relubrication (3 - 5 drops/month)
- Low torque
- Aluminum housing
- Stainless steel or steel rotor (respective of model)
- Lubrication Guide page 55

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Vacuum 28" Hg	6.7 kPa	
Maximum Hydraulic Pressure		
Model 250-094	1,000 PSI	70 bar
Model 355-021	1,000 PSI	70 bar
Model 452-000	750 PSI	50 bar
Maximum Speed NPT Threads	1,500 RPM	1,500/min
Maximum Speed Straight Threads		
Model 250-094	3,500 RPM	3,500/min
Model 355-021	3,000 RPM	3,000/min
Model 452-000	2,500 RPM	2,500/min
Maximum Temperature	250°F	120°C

Union is designed for continuous operation at either maximum speed or maximum pressure. If operating conditions are close to maximum pressure and speed simultaneously, consult ***DEUBLIN***.

To indicate union with additional "K" port with

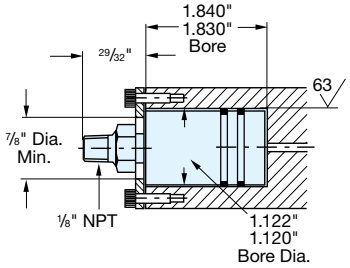
Deublin In-The-Shaft Mounted Unions

Model 1005-000-038 ⅛" Capacity—for Air or Hyd. Oil

Available with 1005 rotors shown on page 32. To meet the specifications of engineering designs requiring minimum overhang. Deublin can provide unions which can be mounted within the shaft. With these models, the only extensions beyond the end of the shaft are the supply line connections.

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Hydraulic Pressure*	1,000 PSI	70 bar
Maximum Speed*	3,500 RPM	3,500/min
Maximum Temperature	250°F	120°C

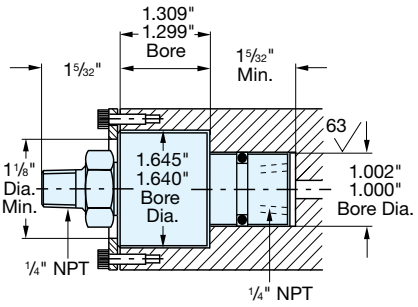


Model 1102-025-081 ¼" Capacity—for Air or Hyd. Oil

Available with 1102 rotors shown on page 32.
Also available with hub mount for CTIS.
See page 52.

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Hydraulic Pressure*	1,000 PSI	70 bar
Maximum Speed*	3,500 RPM	3,500/min
Maximum Temperature	250°F	120°C

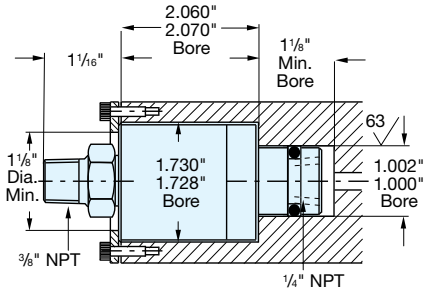


Model 1115-130-002 ⅜" Capacity—for Air or Hyd. Oil

Available with 1115 rotors shown on page 32.

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Hydraulic Pressure	500 PSI	35 bar
Maximum Speed	3,500 RPM	3,500/min
Maximum Temperature	250°F	120°C

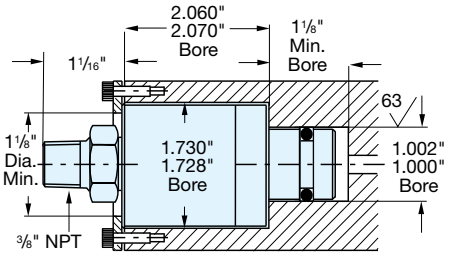


Model 1116-319-248 ⅜" Capacity—for Hydraulic Oil

This model contains E.L.S. seals of silicon carbide to silicon carbide for long life on abrasive applications. Do not run dry.

Operating Data

Maximum Hydraulic Pressure*	1,000 PSI	70 bar
Maximum Speed*	3,500 RPM	3,500/min
Maximum Temperature	250°F	120°C



* Union is designed for continuous operation at either maximum speed or maximum pressure.
If operating conditions are close to maximum pressure and speed simultaneously, consult ***DEUBLIN***.

DEUBLIN

AP Series High Pressure High Speed Unions

- Monoflow design
- Self-supported rotating union
- Seal combination: Tungsten Carbide/Tungsten Carbide
- Double row ball bearing; lubricated for life
- Vent holes
- Steel housing nickel-plated
- Stainless steel end cap and rotor
- All parts in media contact are stainless steel and corrosion resistant
- Designed for high pressure and high speed

Operating Data

Maximum Hydraulic/Water Pressure*	5,700 PSI	400 bar
Maximum Speed*	1,500 RPM	1,500/min
Maximum Temperature	200°F	90°C

* Operation at maximum pressure combined with maximum speed should be avoided. For optional performance, refer to graph. If operating conditions are marginal, consult ***DEUBLIN***.

DEUBLIN

Deu-Plex Air Unions

- Duoflow design
- Self-supported rotating union
- Flanged rotor
- Radial housing connections
- Low torque
- Balanced mechanical seals
- Seal combination: Carbon Graphite/Cast Iron
- Full-media flow
- Aluminum housing
- Cast iron rotor
- Oil cup (3-5 drops/month)

Operating Data

Maximum Air Pressure	150 PSI	10 bar
Maximum Vacuum	28" Hg	6.7 kPa
Maximum Speed	1,500 RPM	1,500/min
Maximum Temperature	250°F	120°C

Only one passage should be pressurized at a time.

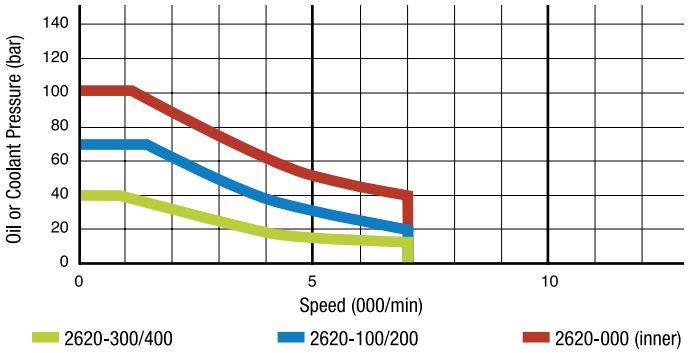
DEUBLIN

2620 Series 2-Passage Rotating Unions for Various Media

- Two independent passages for applications such as clamping and unclamping
- Balanced mechanical seals for each passage provide long life and reduced torque even at maximum pressure
- Closed seals provide continuous containment of media
- Dual precision ball bearings for smooth operation
- Labyrinth protection for ball bearings
- Mountings options are compatible with *DEUBLIN* 2520 or 1579 series unions

Operating Data

Media	See table	
Filtration	ISO 4406 Class 17/15/12, max. 60 micron	
Maximum Speed	7,000 min^{-1}	7,000 rpm
Maximum Pressure	See table	
Maximum Flow	69 l/min	18.2 gpm (per passage)
Maximum Temperature	160°F	71°C



Note: Refer to Page 37 for mounting details.

DEUBLIN

2620 Series 2-Passage Rotating Unions for Various Media

- Two independent passages for applications such as clamping and unclamping, work piece sensing, and cooling
- Balanced mechanical seals for each passage provide long life and reduced torque even at maximum pressure
- Closed seals provide continuous containment of media
- Dual precision ball bearings for smooth operation
- Labyrinth protection for ball bearings
- Mountings options are compatible with *DEUBLIN* 2520 or 1579 series unions

Operating Data

Media	See table	
Filtration	ISO 4406 Class 17/15/12, max. 60 micron	
Maximum Speed	12,000 min-1	12,000 rpm
Maximum Pressure	See table	
Maximum Flow	69 l/min	18.2 gpm (per passage)
Maximum Temperature	71°C	160°F

Operating Data

Maximum Air Pressure (1590)*	150 PSI	10 bar
Maximum Hydraulic Pressure (1579)**	1,000 PSI	70 bar
Maximum Vacuum (1590)	28" Hg	6.7 kPa
Maximum Speed	1,500 RPM	1,500/min
Maximum Temperature	250°F	120°C

* Only one passage should be pressurized at a time.

Operation at maximum pressure combined with maximum speed should be avoided. Pressure rating is for inner passage only. Contact ***DEUBLIN* if outer passage or both passages are pressurized.

DEUBLIN

Deu-Plex Air and Hydraulic Unions

- Duoflow design
- Self-supported rotating union
- Flanged rotor
- Balanced mechanical seals
- Seal combination for 1590: Carbon Graphite/Ceramic
- Seal combinations for 1579: Carbon Graphite/Ceramic - standard Tungsten Carbide/Ceramic - E.L.S.
- Full-media flow
- Aluminum housing
- Cast iron rotor
- Oil cup (3-5 drops/month for 1590)

Slow speed or turnable applications not exceeding 10 RPM		
Maximum Hydraulic Pressure	3,600 PSI	250 bar

* Operating conditions vary depending on the application and must be adjusted so as not to exceed the maximum union housing temperature rating of 195°F.

DEUBLIN

4-Passage Multi-Purpose, Multi-Media Unions

- 4-passage design
- Self-supported rotating union
- Flanged rotor
- Drain passage prevents interpassage leakage
- Special seals
- Hardened sealing surface
- Brass housing
- Stainless steel rotor
- Widely spaced ball bearings to withstand side load
- 5-passage available

A drain port is provided to collect leakage under normal operation. A vent is provided between ports 2 and 3 to allow use with two medias eliminating cross contamination.

Example: Air in 1 & 2 and hydraulic oil in 3 & 4.

DEUBLIN

1129 Series Bearingless Pop-Off™ Rotating Unions for Coolant Service

- Single passage for coolant or MQL
- Patented Pop-Off™ technology allows unlimited dry running without media pressure
- Pop-Off stroke of 0.7-3.0 mm compensates for thermal expansion of spindle during extended operation as well as variations in drawbar position
- Full-flow design has no obstructions to trap chips or debris
- Balanced mechanical seals made from silicon carbide for long life even under difficult operating conditions
- Anodized aluminum housing resists corrosion

DEUBLIN

1101 Series "Closed Seal" Rotating Unions for Continuous Coolant Service

- Single passage for coolant or MQL
- Closed seals for transfer line and similar applications
- Full-flow design has no obstructions to trap chips or debris
- Bearing-supported with threaded rotor for easy installation
- Deep groove radial ball bearings for smooth operation
- Labyrinth system and large vents to protect ball bearings
- Balanced mechanical seals made from silicon carbide for long life even under difficult operating conditions
- Anodized aluminum housing resists corrosion

Operating Data

Media	Water-based Coolant MQL (oil mist) up to 10 bar (145 psi)	
Filtration	ISO 4406 Class 17/15/12, max. 60 micron

Installation Instructions:

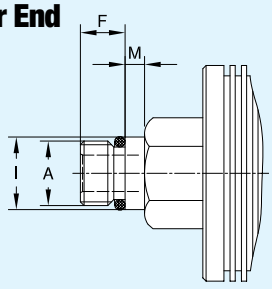
DEUBLIN Coolant Unions are manufactured to precise tolerances for smooth running without vibration or wobble. A critical factor is the accuracy of the spindle end to which the rotor connects. The interface must adhere to the DEUBLIN specifications.

Attention!

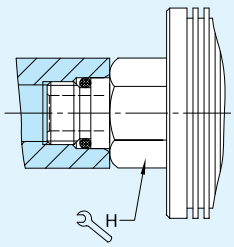
To prevent flooding of bearings, ensure that the drain is continuously sloping downward.

Please refer to "Instructions of Hose Installation" on page 54.

Rotor End



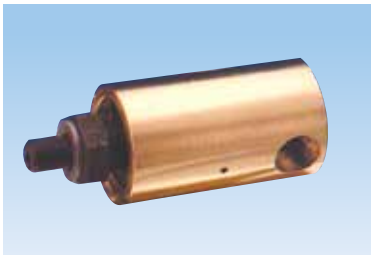
Installed Rotor



Unions for Special Applications

Model 1005-113-063 1/8" NPT, R.H. Rotor Threads
Model 1005-113-110 5/16"-24 UNF, R.H. Rotor Threads

⅛" Capacity



for water service

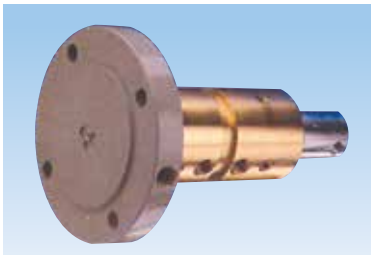
Operating Data

Max. Water Pressure	750 PSI	52 bar
Max. Speed NPT	1,500 RPM	1,500/min
Max. Speed Straight Thread	3,500 RPM	3,500/min
Maximum Temp.	250°F	120°C

This is a small union designed for minimum water flow where space is a problem. The seals are Carbon Graphite-to-Stainless Steel. It has the same dimensions as Model 1005-020-038 on page 32.

Model 468-250 Flanged Rotor

¼" x ⅜" x ⅜" Capacity



for clutch and brake service

Operating Data

Max. Water Pressure	150 PSI	10 bar
Max. Air Pressure	150 PSI	10 bar
Max. Speed	1,500 RPM	1,500/min
Maximum Temp.	250°F	120°C

This 3-passage union was designed to cool and activate clutches and brakes. The (2) 3/8" water passages supply and return water for cooling. The 1/4" capacity air union is tandem mounted to prevent interpassage leakage between the air and water passages. Contact Deublin Engineering Department for complete specifications.

Model 981-300 2"-12 UN R.H. Rotor Threads

½" x 1" Capacity

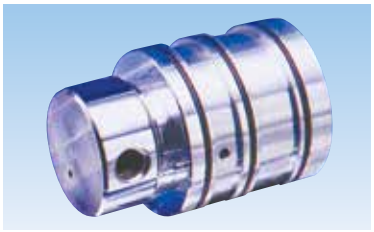
for oil rig service

Operating Data

Max. Water Pressure	150 PSI	10 bar
Max. Air Pressure	150 PSI	10 bar
Max. Hyd. Pressure	500 PSI	33.3 bar
Max. Speed	350 RPM	350/min
Maximum Temp.	250°F	120°C

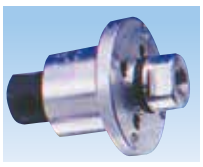
This 2-passage union was designed to cool and actuate Drum Brakes on Oil Rigs. It has a 1" water and 1/2" air passage. The water passage has a cartridge seal that can be repaired on the machine. The 981-300 union can also be used on many other Air/Hydraulic applications. Contact Deublin Engineering Department for complete specifications.

For Central Tire Inflation Systems (CTIS)



Model 882, 2-passage union. 1/8" pilot capacity and 5/16's supply air capacity. Operating data: Maximum air pressure 150 psi, max temperature 250°F, max speed 450 RPM. This 2-passage model was designed to be used where a wheel valve is required. The O-Ringed union body can be installed in the solid axle and air lines connected to the rotor head.

Deublin has developed a number of hub-mounted unions specifically designed to accommodate the passage of air between a vehicle's stationary axles and its wheels. This allows tire pressure to be varied from inside the vehicle's cab, and is already very popular in the logging industry and on military vehicles. The ability to vary the air pressure allows the driver to adjust pressure for the surface being traveled. Lower pressure with a broader footprint is suitable for soft terrain. Higher pressures and a smaller footprint is suitable for higher speed highway travel.



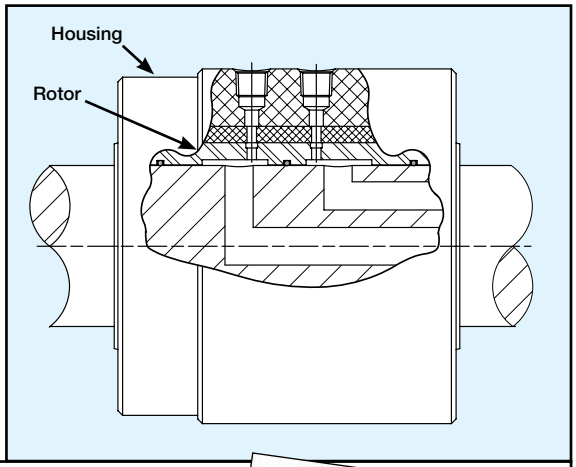
Model 1115-000-001. 11/32" capacity, maximum pressure150 psi. max temperature 250°F, maximum speed 3,500 RPM. This model union is most commonly used when converting a vehicle to the CTIS system. The male thread can be attached to the solid axle and the supply air from the body to the tire. Shaft mounted conversions of this design are available, and illustrated on Page 34.

Model 1102-025-001-004. 1/4" capacity. Operating data 150 psi, max temperature 250°F, maximum speed 3,500 RPM. The 1102 can be partially mounted within the shaft by using the four holes in the flange, which reduces the overhanging length. The 1102 is not shown, however an in-shaft version is illustrated on Page 34.

DEUBLIN

Around-The-Shaft Unions for Air or Hydraulic Service

- Single or multi-passage
- "Controlled leakage" can be vented or channeled to reservoir
- Available for shafts up to 8"
- Capable of handling high speed and pressure
- Custom designed for specific application



Deublin Rotating Unions for Continuous Casting Machines in the Steel Industry

Deublin has been a major supplier to the steel industry for over 45 years and has worked closely with the people who design, manufacture and operate Continuous Casting Equipment worldwide. We have a separate catalog which features the 2400 Series. With its dependable, long-wearing mechanical seals, the 2400 Series can change the way you think about rotating union maintenance.

Deublin-Sint Steam Joints and Siphon Systems for the Paper Making Industry

Deublin has a complete line of steam inducing and condensate removal products designed specifically for the papermaking industry. These products are contained in a dedicated catalog. This line features the revolutionary FS Series Steam Joint with the Deltasint Stationary Siphon System designed and proven for today's high-speed paper machine's dryer sections.

Deublin Rotating Unions for Coolant Applications

Whether CNC machining centers or automotive transfer lines, Deublin offers the broadest range of rotating union solutions for continuous through-the-spindle coolant applications. State-of-the-art features include silicon carbide seals, and dry running capability with or without pressure.

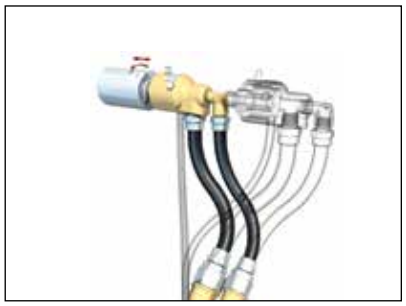
Flexible Hose Installation Instructions for DEUBLIN Rotating Unions

1 Mount housing in a bench vise and install hose.

2 Install rotating union into machine.

3 Connect flexible hose to supply line.

Examples of Flexible Hose Installation



Important

The DEUBLIN ROTATING UNION is a precision-made piece of equipment and should be handled accordingly. It is a rotating sealing device – not just a plumbing union. Improper use could result in premature leakage or failure. While Deublin Unions are of the highest quality and precision, they are "wear and tear" items. It is important that they are periodically inspected and, as seals wear out, the rotating union must be replaced or repaired to avoid the consequence of leakage.

Deublin Unions should never be used for applications other than specified in the catalog. For applications other than stated in the catalog, Deublin Engineering Department should be contacted for recommendations.

These instructions are provided by Deublin as general guidelines. They do not contain exhaustive information about the installation, use or maintenance of unions. Purchasers and users of Deublin Unions should be certain that they have reviewed Deublin's catalog and have sufficient experience and training in the use of unions before attempting installation or use of Deublin's products. The principal responsibility for the safe and effective use of Deublin Unions rests with the user and its employees. Deublin will provide, upon request, whatever assistance it can to advise users about the use of its products and about any difficulties or problems which are brought to its attention.

WARNING DEUBLIN unions should not be used to convey flammable media (flash point ≤ 140°F or 60°C) as leakage may result in explosions or fires. DEUBLIN unions should be used in accordance with standard safety guidelines for the media, and in a well-ventilated area. The use of our product on hazardous or corrosive media is strictly forbidden.

Factory Testing

All DEUBLIN ROTATING UNIONS are factory tested under pressure before shipment. This thorough check assures that each Deublin Union is completely leakproof.

Deublin Rotating Unions can be installed with fullest confidence that it will operate to your complete satisfaction.

Warranty

For a period of one year from the date of shipment, Deublin warrants that the products sold by it are free from defects in material and workmanship. The liability of Deublin is expressly limited to the replacement or rebuilding of any article, or part thereof, proven defective, when returned to the Deublin Company, transportation prepaid within a reasonable time after the termination of the 365-day warranty period.

This warranty is void if the product is dismantled, modified, altered, or damaged from improper maintenance, side-loading, excessive temperature, abrasive or chemical action, or other abuse.

No representative, agent or employee of Deublin has any authority to modify the terms of this warranty. Deublin will not be responsible for any consequential or resulting damage which may be claimed to have occurred through the sale or use of such products or parts, thereof, which might be defective.

There are no warranties which extend beyond the description contained under this heading, express or implied, including warranties of fitness for a particular purpose.

Repair Service

All Deublin rotating unions can be returned to the factory for professional rebuilding. Unions are refurbished to an "as new" condition and carry a New Union Warranty to ensure optimum performance. Contact Deublin Customer Service to arrange repair service.

Unions can be field serviced with rebuilding kits, which are available for most Deublin rotating unions. These kits include seals, rotors and ball bearings. Where field service is essential, Deublin Cartridge Water Unions or 57 Series should be specified.

Installation

No exterior bracing should be used to prevent the housing of a ball bearing type union from rotating. To compensate for any eccentricities occurring from installation, it is imperative that a flexible connection be used. DO NOT PIPE SOLID. Use a 45-degree elbow and pipe union on the riser, making certain there is a slight curve in the hose. Do not install hose taut.

To facilitate adapting the housing inlet (Port "B") to your equipment we suggest the following:

Barbed Hose Fitting

Since its establishment in 1945, Deublin has consistently adhered to a policy of producing the best product of its kind in the market. The result of this policy has been constant growth through the years. For this progress we are grateful to our many loyal customers. We cordially invite you to visit our modern manufacturing facilities in Waukegan, Illinois; Mainz, Germany; Monteveglio, Italy; and Dalian, China.

Sincerely,

Donald L. Deubler
